Week 5 Cheat sheet

* Classes

* this is a blue print used to create objects

* Class record :

↓ ↳

tells python youre creating a class

* Objects

* you Create an object by Calling the Class name

→ r1 = record

r2 = record

3

The __init__() → Sets up the Objects Information

→ parameters ⇒ label $ value

* Self.label . Self.value are attributes belonging to the object

Attributes

* Stores Information about an object

↳ Self.label, Self.value etc

* return → Sends a result back

* list $ loops let you process many objects

Week 2 Clean Sheet

1 Comparson operators

= equal to
!= Not equal to
> = greater than
< = less than
>= Greater than or equal to
<= less or equal than to

2 IF → ~~run~~ Condition works only if its true

3 ELIF → Checks another Condition if the earlier Condition was fake

ELSE → runs when all previous Conditions are false

6 While loop ⇒ repeats code remains true
For loop → goes through the items in a sequence

range () ⇒ generates a sequence of numbers

Week 3 ~~f~~ Flea Cheat Sheet

* Function - reusable block of Code

def
greet
()

The Indented Code its function body

* Parameters and arguments

→ variable listed in a function def

→ an argument

is the value Supplied when calling the function

* return Statement

* Sends a result back

local variable

* created Inside a function and is normally only accesible within that function

```
def test ()
Message = "Hello"
print (message)
```

Week 4 Cheat sheet

* lists

* Store multiple items in one variable

* Changing and adding list items

*Values = [10, 20, 30]

value [0] = 15

3 list operations

append (x)	adds x to the end
remove (x)	removes the first value
pop ()	removes and returns the last item
len (list)	Count the items
list [0]	Gets the first item
list [-1]	Gets the last item
